

Paramount Pursuits

HubSpot to Zoho One Migration & Custom CRM Build-Out

A Case Study in Data Migration, Workflow Automation, and Business Intelligence

1. Client Overview

Paramount Pursuits, LLC is an entrepreneur education and economic development consulting organization (operating since 2016) that delivers business coaching, mentorship, and workshop programs to small businesses, nonprofits, and aspiring entrepreneurs. Their program portfolio includes Launch, Thrive, Ascend, Pathways, Open for Business (OFB), Shell LiveWire Pennsylvania, Food Justice Fund, and Tech2Elevate, delivered in partnership with corporate and government funders.

Because Paramount runs multiple concurrent, funder-specific programs — each with its own client intake process, consultant assignments, and reporting obligations — their operations depend on clean, unified client data and reliable session-level reporting across every program.

2. The Challenge

Paramount Pursuits was operating out of HubSpot, which was not built to handle the organization's core reporting need: program-specific session notes tied to individual consultants, clients, and funders, rolled up into KPI dashboards that funders require for compliance and renewal reporting.

Specific pain points included:

- Fragmented client records across Contacts, Leads, and Funders with no unified 360° view.
- No structured session-note data model — consultant visit notes, time spent, and outcomes were not captured in a reportable format.
- Manual webinar attendee tracking with no link back to CRM contact records.
- Attachments and signed documents (including PandaDoc proposals/agreements and historical email attachments) scattered and not tied to contact records.
- No self-service reporting for program managers or funders — reporting was manual and after-the-fact.

The objective was a full migration to Zoho One, re-architected around Paramount's actual operating model, not a lift-and-shift of the HubSpot schema.

3. Solution Architecture

The solution was built across five connected Zoho applications, orchestrated so that data entered once (via a form or the CRM) automatically propagates everywhere it's needed: HubSpot/PandaDoc APIs feed Zoho CRM; Zoho Forms feed Zoho Flow, which synchronizes Zoho Creator and Zoho CRM; and both CRM and Creator data feed Zoho Analytics dashboards.

3.1 Data Migration — HubSpot → Zoho CRM

Using the HubSpot API and PandaDoc API, contacts, leads, deals/companies, email attachments, PandaDoc documents, and webinar registrants were extracted, transformed, and loaded into Zoho CRM:

Source Object	Destination in Zoho CRM	Notes
Contacts	Clients module	Custom fields added: Contact Type, Program status, Business/Organization Name
Leads	Leads module	Standard conversion mapping preserved
Deals/Companies	Funders module	Custom module built to track funding partners

Source Object	Destination in Zoho CRM	Notes
Email attachments	Attachments related list	Re-linked to correct Client record
PandaDoc documents	Attachments / custom fields	Sync tracked via PandaDoc Documents Synced / PandaDoc Not Found fields
Webinar registrants	Webinar Attendees related list	Linked to BigMarker webinar activity

Each Client record in Zoho CRM (Figure 1) surfaces a unified activity view: Emails, Attachments, Open/Closed Activities, Invited Meetings, Webinar Attendees, and program applications (Business Assessment, OFB Assessment, Thrive cohorts) — replacing what had been siloed HubSpot properties and manual spreadsheets.

Figure 1 — Zoho CRM Client record: unified activity view (Emails, Attachments, Closed Activities, Invited Meetings, Webinar Attendees).

Custom status fields were added directly to the Client record to support funder reporting without leaving the CRM, e.g. Contact Type (Current Program Participant / Program Graduate / At Risk Client / Removed from Program), On Boarding Meeting Held, and PandaDoc Documents Synced.

3.2 Session Notes Data Model

The core technical build was a multi-program Session Notes system, since Paramount's consultants run session types that differ structurally by funder (Food Justice Fund, Open for Business, Tech2Elevate Digital Coach) but must all roll up to the same Client record and the same KPI dashboards.

Design decisions:

- A single Zoho Creator application (SessionNotes) acts as the system of record, with program-specific subforms (tabs) — Paramount Session Notes, Tech2Elevate Digital Coach, and Open for Business — each capturing the fields relevant to that program (session type, engagement date/time, meeting type, billable time, client highs/lows, “Big Win” narrative).

- Each Session Note record is linked back to the originating Client record in Zoho CRM and rendered inline as a related list, so consultants and program managers see full session history without switching systems.
- Data capture happens through program-specific Zoho Forms with required-field validation, dropdown-driven Consultant Company Name, and structured Client/Business fields — eliminating free-text inconsistency at the point of entry.
- Every session note stores: Consultant Name, Client Name, Business/Organization, Session Type, Session Date, Time Spent (minutes), and a narrative “Big Win”/outcome field — the minimum structured fields needed for both consultant performance reporting and funder KPI reporting.

The screenshot shows a Zoho CRM interface with a sidebar on the left containing navigation links like Home, Workspaces, Reports, Analytics, My Requests, Agents, and a dropdown for Paramount. The main area displays a 'SessionNotes' table for a client named Donna Jackson. The table has columns for Client Name, Session Date, Session Type, Consultant Name, Time Spent (min), and Action. There are five rows of session data, each with 'View' and 'Delete' buttons in the Action column.

CLIENT NAME	SESSION DATE	SESSION TYPE	CONSULTANT NAME	TIME SPENT (MIN)	ACTION
Donna Jackson	23 Jun 2026	Food Justice Fund	Jeff Fatima	0.25	View Delete
Donna Jackson	16 Jun 2026	Food Justice Fund	Jeff Fatima	1.00	View Delete
Donna Jackson	4 Jun 2026	Food Justice Fund	Marcos Digilodo	2.00	View Delete
Donna Jackson	3 Dec 2025	Food Justice Fund	Jeff Fatima	0.50	View Delete
Donna Jackson	5 Nov 2025	Food Justice Fund	Julie Inman	1.00	View Delete

Figure 2 — Session history for a client (Donna Jackson / Food Justice Fund) rendered as a related list inside the CRM record, pulled live from Zoho Creator.

The screenshot shows a detailed view of a session note for Donna Jackson. The form is titled 'Donna Jackson' with ID 4968842688888447888. It includes a 'PARAMOUNT SESSION NOTES' section with a 'SESSION TYPE' dropdown set to 'Food Justice Fund'. Below this is a 'FOOD JUSTICE CLIENT' section with fields for 'Food Justice Client Name' (redacted), 'Food Justice Email' (redacted), 'Food Justice Organization or Entity Name' (Larimer Consensus Group), and 'Engagement Details' with fields for 'Food Justice Engagement Date-Time' (23 Jun 2026), 'Food Justice Type of Engagement' (Virtual One on One Meeting), 'Did your client attend the scheduled Food Justice Meeting?' (checkbox), and 'Virtual Meeting Billable Time (Food Justice)'. The form also shows 'Added: 23 Jun 2026' and 'Modified: 3 Jul 2026' at the bottom.

Figure 3 — Session Note detail view: program-specific subform (Food Justice Fund) with engagement date, meeting type, and billable time captured against the linked client.

PARAMOUNT PURSUITS Open for Business Consultant Session Note

Consultant Name. The lead consultant on the OFB program

First Name Last Name

Consultant Email *

OFB Client Name *

First Name Last Name

OFB Client Email *

Client's Business Name *

OFB Session Date *

Figure 4 — Open for Business Consultant Session Note intake form (Zoho Forms), with required-field validation and structured client/business capture at the point of entry.

3.3 Automation Layer — Zoho Flow

Three production Zoho Flow automations (workspace: Session Notes Synchronization) form the integration backbone between Forms, Creator, and CRM:

Flow	Function	Status
Create Session Report Meeting and Sync in Creator	Fires on new session note submission → creates the meeting record and syncs the session note into Zoho Creator	ON — 76 executions, 0 failures
Sync Open for Business	Pushes OFB-program session notes from Creator into the corresponding Client record in CRM	ON
Sync Tech2Elevate Digital Coach	Pushes Tech2Elevate coaching session data from Creator into CRM	ON

Figure 5 — “Session Notes Synchronization” Zoho Flow workspace: three active flows connecting Forms, Creator, and CRM.

Each flow uses a custom function (syncSessionNoteWithCRMMeeting) to match the incoming session note to the correct existing Client record (rather than creating duplicates), then writes back a linked Meeting/Activity record and updates the CRM related list in real time.

Figure 6 — Flow execution summary: 76 total executions over a 7-day window, 100% success rate, zero filtered or failed runs — validating that the sync logic reliably resolves client matches across programs.

3.4 Reporting & Business Intelligence — Zoho Analytics

All Session Notes and Client data feed into Zoho Analytics, where three dashboard sets were built to serve different audiences.

Program KPI Dashboard

Tabbed by OFB Monthly Data, FJF Monthly Data, and OFB Program Data, with scorecards for OFB Consulting Hours, Mentor Hours, Outside Consulting Hours, Assessments Completed, and Approved/Denied/Total Applications, plus a drill-down pie chart of application decision status.

Figure 7 — Program KPI Dashboard (OFB Monthly Data): consulting/mentor hours, assessments completed, and application decision status.

A stacked bar chart of client counts by program (Food Justice Fund, Open for Business, Shell LiveWire PA, Thrive in Erie, etc.) segmented by Contact Type lets a program manager see at a glance how many clients per program are “Current Program Participant” vs. “At Risk Client,” alongside an overall client-status distribution used for funder-facing retention/outcomes reporting.

Figure 8 — Program KPI Dashboard (OFB Program Data): client counts by program segmented by status, and overall program outcome distribution (Graduate / Current / Removed / Resigned / At Risk).

“Big Wins” Report

A filterable, exportable table (Session Date, Coach Name, Client, Business Name, Program, Big Wins narrative, Hours Billed, Session Notes) that lets program staff pull qualitative outcome evidence per funder without touching the underlying CRM/Creator records.

ID	Session Date	Date Entered	Coach Name	Client First Name	Client Last Name	Business Name	Client Email	Program Name	Big Wins	Hours Billed	Session Notes
1	14-Jul-2026 04:02:00	14-Jul-2026 04:06:51	Trish Digilodo	Tamu	Gilbert	Creative Concepts Collective	tglib5171@outlook.coi	Shell LiveWire PA	Client's Business Facebook Page is LIVE: https://www.facebook.com/61591424926896	1.00	Reviewed domain names that client can possibly used. Shared Google training resources. Helped client set up Google Workspace and Facebook Page.
2	22-May-2026 12:00:00	10-Jun-2026 08:45:24	Jenlin Lagubis	Michael	Kroner	Krone and Associates Counseling	mikekronercounseling	Shell LiveWire PA	Was able to successfully help client with having a brand guide and also social media templates for their social media account.	5.00	Created branding guide and also social media templates for brand consistency
3	19-Mar-2026 12:00:00	10-Jun-2026 08:45:24	Jenlin Lagubis	Andre	Dunlap	Eclat Transportation	andre.j.dunlap@gmail.c	Thrive in Erie	Was able to create Facebook covers that matches the brand's tone for brand consistency	1.00	Successfully created 3 versions of FB covers to match the flyers I created last time.
4	19-Mar-2026 12:00:00	10-Jun-2026 08:45:23	Jenlin Lagubis	Andrew	Moeller	Hank's	hankscustardnb@g02h	Ascend	Helped brand make a business card design that is aligned with brand's consistency	2.00	Completed 4 sample business card designs

Figure 9 — “Big Wins” report across OFB Professional Services clients, combining hours billed with narrative outcome data for funder evidence.

Shell LiveWire Mentor Meeting Attendance

A funder-specific attendance report with live filters by Session Date and Client Name, and footer aggregate functions (SUM of Time Spent, COUNT of sessions) for quick funder reporting on mentor engagement hours.

ID	Business Name	Client Email	Program Name	Submitted By	Time Spent	Client Highs	Client Lows	Update & Notes	Big Win
16	alexandrakaluza@gmail	Shell LiveWire PA			1.00			Alexandra is working on getting the drug testing done required to setup a food stand in the Shell plant.	delivered 7 caterings to the Shell Plant so far and a variety of departments are ordering from them.
17	alexandrakaluza@gmail	Shell LiveWire PA	julie@paramountpursu		1.00			Alexandra is working on the potential of working with the power plant to deliver sandwiches. They heard about the work they are doing at the Shell plant.	

Figure 10 — Shell LiveWire Mentor Meeting Attendance report with filters and live SUM/COUNT aggregates for funder engagement-hour reporting.

4. Technical Stack Summary

Layer	Tool	Purpose
Data source (legacy)	HubSpot API	Contact/Lead/Deal extraction
Document source	PandaDoc API	Signed document/attachment extraction
System of record	Zoho CRM	Clients, Leads, Funders, Activities, Attachments

Layer	Tool	Purpose
Structured intake	Zoho Forms	Program-specific session note capture, direct Form-to-CRM
Session data store	Zoho Creator	Multi-program Session Notes application
Integration/automation	Zoho Flow	Form → Creator → CRM synchronization, meeting creation
Reporting	Zoho Analytics	KPI dashboards, funder reports, attendance tracking

5. Results & Impact

- Zero data loss migration: Contacts, Leads, Session Notes, Webinar data, Form submissions, and PandaDoc attachments migrated from HubSpot with full historical continuity.
- 76 successful, zero-failure Flow executions in the most recent reporting window, confirming the automation layer reliably keeps Creator and CRM in sync across three concurrent programs.
- Unified 360° client view in Zoho CRM: consultants and program managers no longer switch between systems to see session history, attachments, and program status.
- Self-service funder reporting: Shell LiveWire, Food Justice Fund, and OFB dashboards let program staff generate compliance-ready reports on demand instead of manual compilation.
- Structured outcome capture: qualitative “Big Win” data — previously inconsistent free text — is now captured, filterable, and reportable across every consultant and program.
- Multi-program scalability: the subform/tab architecture in Creator means a new funder program can be added without rebuilding the entire session-notes system.

6. Conclusion

By re-architecting Paramount Pursuits' operations around Zoho CRM, Creator, Flow, and Analytics rather than replicating the HubSpot schema, the migration turned a manual, spreadsheet-dependent reporting process into an automated, real-time system of record — giving program managers, consultants, and funders a single source of truth for client engagement and program outcomes across every Paramount Pursuits program.
